MANEESH KUMAR CHINTAKINDI

AI/ML Engineer | LLM Agents, RAG & Evals

Dallas, TX (open to relocation) | maneeshchintakindi10@gmail.com | 940-594-7797 | linkedin.com/in/maneesh-kumar-chintakindi | github.com/Chintu1024 | chintu1024.github.io/Maneesh_Portfolio

SUMMARY

AI engineer who builds and ships production LLM-powered agents and tools that act on real data. At Effulgent Inc, built a multi-agent workflow that automated B2B outreach to 170+ prospects and trading agents with live WebSocket dashboards, and integrated the Claude API and Voyage AI embeddings into a production ranking system that improved recall@10 from 48% to 89%, measured against an independent answer key. Builds the evals to match: 300 automated Pytest tests, a 597-document adversarial test set, and accuracy benchmarks (96% top-1, zero false positives) that keep releases trustworthy. Solid Python and SQL (PostgreSQL, pgvector) with hands-on RAG, LangChain, structured-output, and prompt-engineering experience. Ships daily with AI coding agents across development tasks, reviewing, testing, and owning what they write. M.S. in Artificial Intelligence (University of North Texas).

TECHNICAL SKILLS

Agents & LLMs: Claude API, Voyage AI (Embeddings), Multi-Agent Systems, Agentic Workflows, RAG, LangChain, FAISS, Prompt Engineering, Structured Output Generation, Function Calling, Hugging Face Transformers

Search & Ranking: pgvector, Hybrid Search, Query Optimization, PostgreSQL, MySQL, NoSQL, Google BigQuery

Languages & Backend: Python (primary), TypeScript, JavaScript, SQL · FastAPI, Flask, Django, Node.js, REST APIs, WebSockets, Microservices

Web (plus): React.js, Angular, HTML5, CSS3

Testing & Evals: Pytest, Automated Testing, Adversarial & Edge-Case Test Sets, Debugging, Code Reviews, OOP, SDLC, Agile/Scrum

AI-Assisted Development: Daily use of AI coding agents across development tasks — reviewing, testing, and owning the code they produce

Cloud & DevOps: AWS (S3), Microsoft Azure (AI Engineer Associate — Certified), GCP, Docker, Docker Compose, Git, GitHub Actions CI/CD, Cloudflare, Linux

EXPERIENCE

AI/ML Engineer | Effulgent Inc | Prosper, TX *Sep 2026 – Present*

- Built a multi-agent workflow that automated B2B outreach to 170+ prospects, and trading agents with WebSocket streaming and live dashboards tracking performance in real time — agent systems that act on real data with no human in the loop for routine cases.
- Integrated the **Claude API** and **Voyage AI** embeddings into Placewise, Effulgent's production candidate-ranking service, improving ranking from 48% to 89% recall@10 at 98% precision@10, measured against an independent answer key.
- Built a PostgreSQL-backed hybrid search service (pgvector plus keyword search) that runs its ranking in a single SQL query, cutting warm p50 latency from 781 to 221 ms and database query time from 254 to 17 ms.
- Built a 597-document test set (including scanned, corrupt, and malicious files) to validate every model release: 100% correct routing, 99.7% extraction accuracy, and 100% of bad inputs caught — an adversarial eval suite that gates every deploy.
- Wrote and maintain 300 automated Pytest tests covering the full pipeline, and fixed all 3 findings of an independent security review; deploy via Docker Compose to GCP through a GitHub Actions CI/CD pipeline with health checks, automatic rollback, and Cloudflare failover.
- Built a RAG-based document search service over 107 course transcripts using PostgreSQL/pgvector hybrid search, tested against a 65-question answer key: 96% top-1 accuracy with zero false answers on out-of-scope questions.
- Developed the core Python backend for Placewise: an event-triggered, multi-step pipeline (dedupe, parsing, extraction, validation, embeddings) running over a PostgreSQL job queue with parallel workers to score every applicant.

GenAI Application Developer — Graduate Practicum | University of North Texas | Denton, TX *Jul 2025 – Dec 2025*

- Built a Python/FastAPI backend that answers questions over uploaded documents using retrieval-augmented generation, taking it from prototype to a working API — exposing upload, query, and retrieval as RESTful JSON endpoints.
- Built the end-to-end RAG pipeline: ingestion, preprocessing, chunking, embeddings, vector indexing, retrieval, and structured response generation; tracked versions and quality in MLflow.
- Wrote automated tests for accuracy, edge cases, and API reliability, and documented the full architecture and API.

Python Developer — Backup & Recovery Automation | Client: Ericsson | Hyderabad, India *Jan 2022 – May 2024*

- Developed and maintained production Python applications for enterprise backup and recovery on Symantec NetBackup (installation, storage unit creation, policy configuration, recovery preparation), reducing manual effort across client operations.
- Ported legacy shell scripts into modular, object-oriented Python with better error handling, maintainability, and long-term supportability.
- Built Pytest-based test automation frameworks and unit tests to validate installation, policy, and recovery workflows before release.

PROJECTS

LLM-Powered GenAI Application — RAG & Structured Output *Hugging Face · LangChain · FAISS · LoRA · FastAPI · Azure AI · MLflow*

- Built a production-grade GenAI application using RAG — combining a LoRA fine-tuned LLM with FAISS dense retrieval and LangChain — to produce structured, context-aware outputs with function-calling and JSON schema enforcement.
- Implemented few-shot, chain-of-thought, and structured-output prompt engineering strategies to ensure reliable, low-hallucination responses across diverse input categories; deployed via a FastAPI REST API on Azure AI and tracked all experiments with MLflow.

Intelligent Content Classification System — Full SDLC *Python · Flask · REST API · Scikit-learn · Power BI*

- Led end-to-end development — requirements, design, coding, testing, debugging, deployment — of a multi-algorithm text classifier (SVM, CNN) reaching 95%+ accuracy on large-scale datasets, deployed as a Flask REST API.

EDUCATION

M.S. in Artificial Intelligence | University of North Texas, Denton, TX *GPA: 3.6/4.0 · May 2026*

B.Tech in Computer Engineering — AI & ML Specialization | Ganpat University, India *GPA: 8.32/10 · May 2024*

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate — Microsoft (2024) · ChatGPT Deployment Practitioner — OpenAI Partner Network (Nov 2026) · Generative AI with Large Language Models — DeepLearning.AI / Coursera (2024) · In Progress: Claude Certified Developer — Foundations (Anthropic)
